Implant Payment Options

We believe everyone deserves to have the best tooth replacement options available to them. As such we have three payment options available to make Implant treatment affordable to all of our patients.

Implants are done in 2 stages; the first being implant surgery which ranges in cost between \$1500.00 to \$2500.00. The cost is determined by the complexity of each individual's case. The second stage of the implant process is to place the prosthetic device; either a crown at a cost of also \$1500.00 to \$2500.00, or an overdenture which ranges from \$4000.00 to \$10000.00, again determined by the complexity of each individual's case.

Option #1 – Payment for the surgical part of the implant is made at the time of the surgery and the payment for the prosthetic device is paid for on the day the crown or denture is placed.

Option # 2 – Payment of 25% of the total cost of the implant, and 5 equal monthly payments for the balance.

Option # 3 - A longer payment plan is available with a Dental Financing Company, in which a loan of one to five years may be obtained at an interest cost of 3-9%.

We can provide you with the application details should this be of interest to you.

Please speak to our administration team for any further questions or concerns, and to indicate which option is best for you.

Thank you for choosing us to provide your implant treatment.
